Clements & Sweet
Law Firm

The System

- ❑ 10 kW Photovoltaic Array
- ❑ 48 SunPower Solar Panels
- ❑ 15,000 kWh clean energy savings annually
- ❑ 25 year system life

A Commitment to the Environment

In July of 2009 John and Midge Sweet partnered with Radiance Solar to build one of Downtown Atlanta's first solar photovoltaic systems. The Sweets have been long time environmental advocates, and the installation of their first solar array serves as a statement about their commitment to clean energy. As one of the first law firms in Georgia to adopt renewable energy, the Sweets will realize substantial energy savings and will be able to promote the firm's sustainability by reducing their environmental footprint.

"Georgia has a great solar resource and smart businesses realize that an investment in clean energy makes both financial sense and promotes environmental stewardship. We are excited to do our part to promote solar technology in downtown Atlanta."

- John Sweet
