

Ecolumina Showcase

Partnered with Radiance Solar

In 2008 Radiance Solar partnered with Bert and Laura Jones to provide solar energy for the Atlanta Homebuilders Showcase Home.

The Ecolumina Project is a landmark residence that incorporates the latest technologies to create an environmentally friendly home that serves as a source of inspiration and information for Green builders throughout the Southeast.

Solar on the Ecolumina Project

Solar energy plays an integral part of the strategy for the Ecolumina home. Radiance installed 3kW of photovoltaic panels to offset the home's electricity needs with clean, solar power. The home was also outfitted by Radiance's team with two solar thermal collectors to generate hot water for the home's use.

Ecolumina's solar portfolio includes:

- ❑ 3 kW of Sharp 208-watt Photovoltaic Panels
- ❑ SMA Sunny Boy Inverter
- ❑ 2 Enerworks Solar Thermal Hot Water Collectors
- ❑ Marathon Electric Backup Tanks
